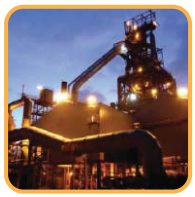
Field Evaluation



Field Evaluation

Field Evaluation is an electrical approval program recognized by all "Authorities having Jurisdiction" in Canada. It is designed for low volume or specialized equipment where certification is not the fastest or most cost effective option. Imported equipment, prototypes, gas appliances, hazardous location equipment, samples or manufactured equipment can qualify for a Field Evaluation label and be approved for sale or use in Canada. Field Evaluation is the best solution for:

- Low volume and "one-of-a-kind" equipment, including Hazloc equipment and gas appliances
- Prototypes and innovations
- Equipment already shipped or onsite
- Witness testing
- Pre-construction drawing review

How LabTest Can Help

We're committed to responding to your needs within 24 hours—no matter where in the world your equipment is located. LabTest is accredited by the Standards Council of Canada. That means that once you receive our label, your equipment is approved for use anywhere in Canada. Upon successful inspection and compliance to mandatory and non-destructive tests, your electrical equipment will be deemed "Approved" and labelled on-the-spot. If the equipment does not meet Canadian Codes and Standards, LabTest's inspectors will provide you with a report detailing the required alterations. We will support your staff throughout the process until your equipment is approved.

LabTest has established an excellent track record for fast, cost-effective and accurate results in a business where attention to detail is critical and cost is always a concern.

For organizations with global markets and/or multiple product categories, **LabTest** offers you a "One-Stop-Solution" for both domestic and international markets.
